Introduction

- ❖ The Travel and Tourism Management System is a Java desktop application designed to digitalize major operations of a travel agency.
- ❖ The main purpose of this project is automate booking, customer management, hotel selection, payment handling, and package registration using an easy-to-use graphical interface.
- ❖ This system helps users to:
 - Register and log in securely
 - View and update personal details
 - Book tour packages
 - Book hotels
 - Make online payments
 - View booked details
 - Delete their account and associated booking records
- ❖ The application is implemented using Java Swing for GUI, JDBC for database connectivity, and MySQL for backend data storage.

FEATURES OF JAVA USED

- OOP Concepts
Classes,objects,constructors,abstraction and encapsulation

- Java Swing GUI
JFrame : The main window of a Java Swing application.

JLabel : A component used to display text or images on the GUI.

Jbutton : A clickable button used to perform actions.

JTextField : An input box that allows the user to enter text.

JPasswordField : Special type of text field used to enter passwords.

ImageIcon : Used to load images from the “icons” folder and display them on the window.

Choice : Dropdown list that allows selection of one item from multiple options.

TextArea : Display multiple lines of text.

JEditorPane : Display webpages or formatted HTML content inside the application.

- Event handling
All buttons and user actions are handled using java's event driven model.
- Exception Handling : The project handles errors using try-catch blocks.
- Java JDBC : Connect the Java application with MySQL.
- Images and Multimedia Support : The ImageIcon and Image classes are used for adding images to forms, Resizing images, Using banner Images.
- Multi-window Navigation : The application uses windows and navigation.

System Design

1. Architectural Design

The follows a 3-tier architecture:

(A) Presentation Layer - Java Swing GUI

**User interacts with forms like
login,signup,Dashboard,Book Hotel,etc.**

(B) Application Layer - Java Classes+Business Logic

Fetching data from MySQL

Processing Booking details

Performing cost calculations

Validating inputs

Handling user actions

(C) Database Layer - MySQL

Contains tables:

Account

Customer

Bookpackage

Bookhotel

2. Database Design

User Authenticarion Table

Account(username,name,password,question,answer)

Customer Details

**customer(username,id,number,name,gender,
country, address,phone,email)**

Package Booking

**bookhotel(username,name,persons,days,ac,food,
number,phone,price)**

Hotel Booking

**bookhotel(username,name,persons,days,ac,food,id,
number,phone,price)**

Hotel Master Table

hotel(name,costperpersons,acroom,foodincluded)

Application Flow :

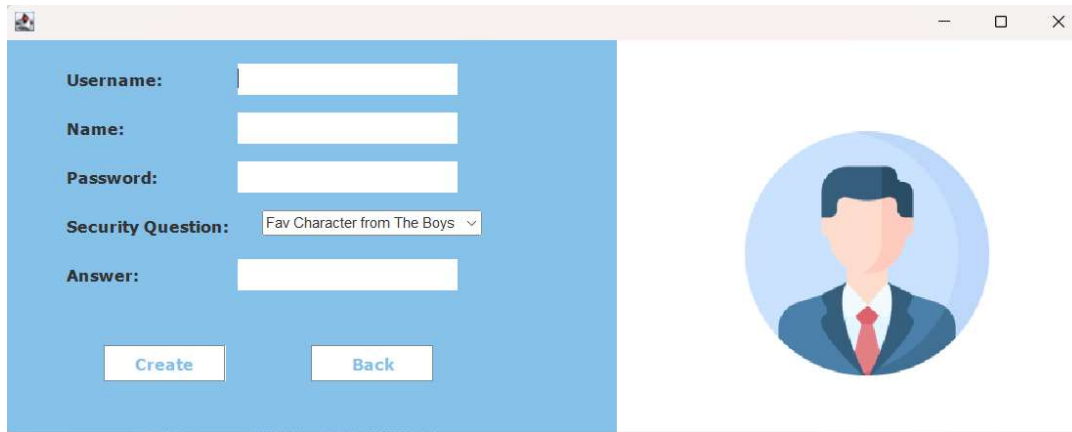

1. Splash: User open the program

2. Login : Allows users to enter their username and password to access the system. It checks credentials from the database and opens the main dashboard after successful login.

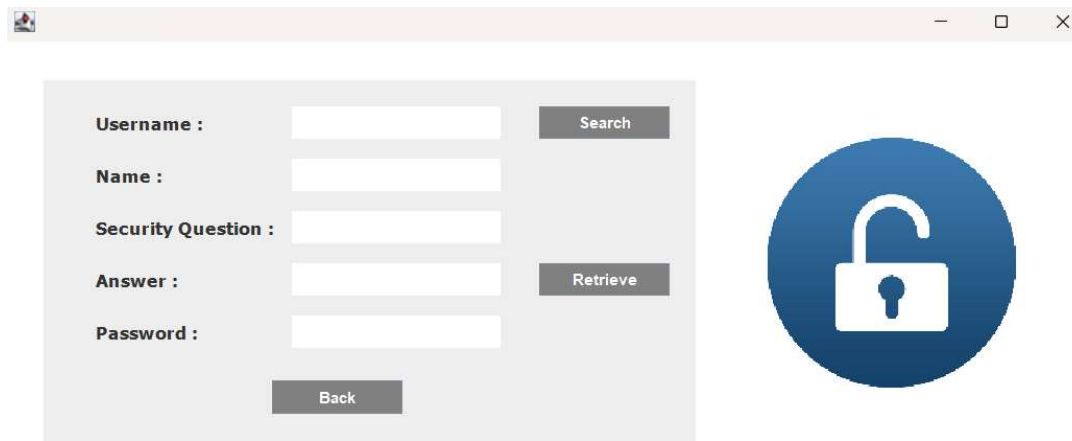

A screenshot of a web application interface for login and signup. On the left, there is a blue square containing a black silhouette of a person in a suit. On the right, there is a light gray form with the following elements: a 'Username' label above a text input field, a 'Password' label above a text input field, a blue 'Login' button, a blue 'Signup' button, a blue 'Forgot Password' button, and a red 'Trouble in login...' link.

3. Signup : Lets new users create an account by entering basic details. The information is stored in the database and used for future login and personalization.

A screenshot of a web application window showing a registration form. The form is set against a light blue background and includes the following fields: 'Username:', 'Name:', 'Password:', 'Security Question:' (with a dropdown menu showing 'Fav Character from The Boys'), and 'Answer:'. At the bottom of the form are two buttons: 'Create' and 'Back'. To the right of the form is a circular placeholder for a user profile picture, featuring a stylized illustration of a man in a suit and tie.

4.ForgetPassword :Helps users recover their account if they forget their password. They can verify their identity by answering a security question and then set a new password. This ensures secure and easy password recovery.

A screenshot of a web application window showing a password recovery form. The form is set against a light gray background and includes the following fields: 'Username :', 'Name :', 'Security Question :', 'Answer :', and 'Password :'. To the right of the 'Username :' and 'Security Question :' fields is a 'Search' button. To the right of the 'Answer :' field is a 'Retrieve' button. At the bottom of the form is a 'Back' button. To the right of the form is a circular icon with a white padlock on a blue background.

4. Loading :This screen shows a progress bar while the application prepares the dashboard. It gives users a smooth transition after login and indicates that the system is processing their data.

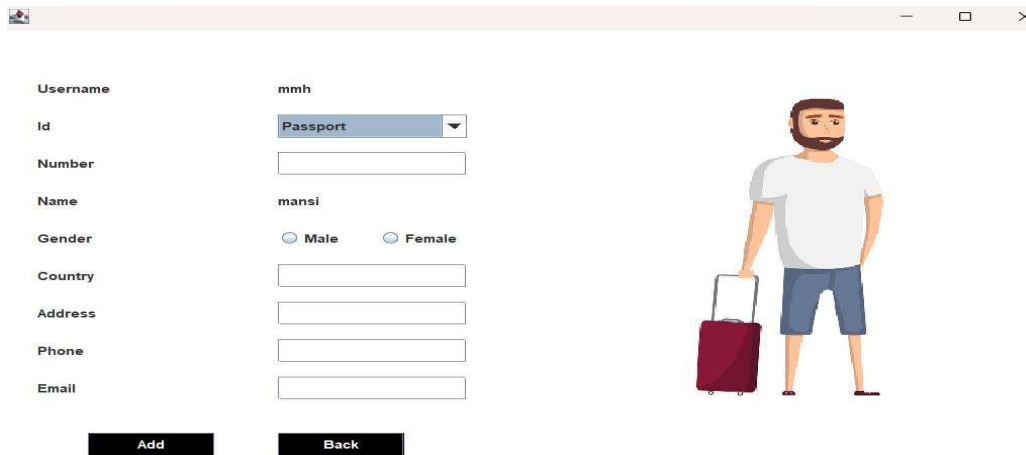

Welcome mmh

5. Dashboard : The dashboard acts as the main control panel of the application. All important features like packages, hotels, bookings, tools, and user details can be accessed from here. It helps the user navigate the entire system easily and quickly.

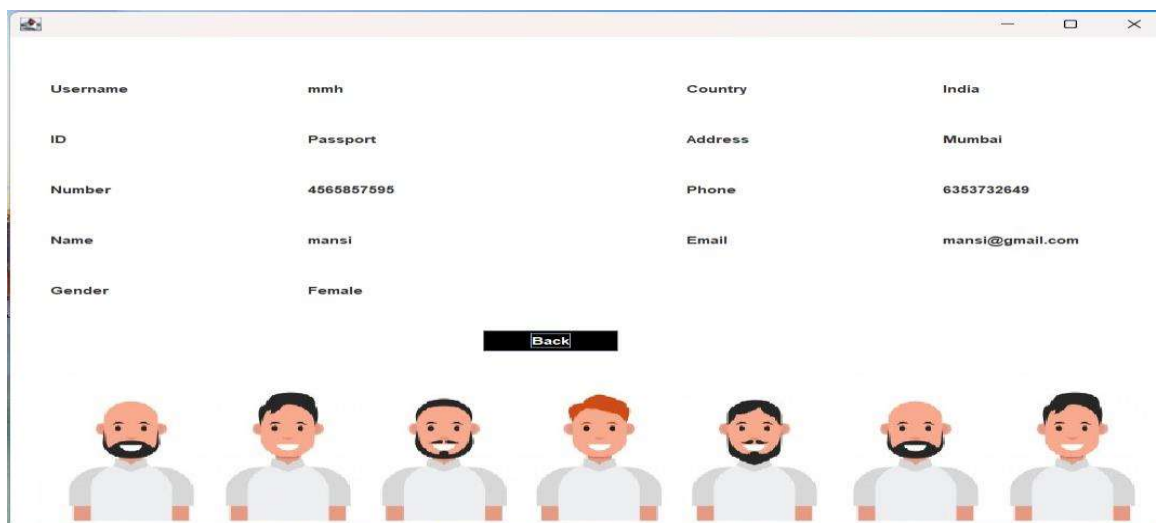

6. AddCustomer : This feature lets users enter their personal details into the system for the first time. It stores information like name, address, phone number, and ID safely in the database. It ensures the application can personalize services based on the user's profile.

Username	mmh
Id	Passport
Number	
Name	manshi
Gender	<input type="radio"/> Male <input type="radio"/> Female

7. ViewCustomer : This section shows all the personal details a user has added to their profile. It helps users review their stored information in one place. They can quickly confirm whether their details are correct before making bookings.

Username	mmh	Country	India
ID	Passport	Address	Mumbai
Number	4565857595	Phone	6353732649
Name	mansi	Email	mansi@gmail.com
Gender	Female		

8. UpadteCustomer : This feature allows users to edit or correct their personal details whenever needed. It ensures that all stored information stays accurate and up to date. Users can update fields like name, address, phone

number, and more from one place.

9. **CheckPackage** :This section displays all the available travel packages in a simple and organized way. Users can compare package details like price, duration and inclusions. It helps them decide which package suits their needs before booking.

Package 1Package 2Package 3

GOLD PACKAGE

- 6 Days and 7 Nights
- Airport Assistance
- Half Day City Tour
- Daily Buffet
- Soft Drinks Free
- Full Day 3 Island Cruise
- English Speaking Guide

Book Package

SUMMER SPECIAL

Rs 32000/-

12. **CheckHotels** :This section displays a list of available hotels along with details like room cost, AC charges, and food options. It helps users compare different hotels before making a booking. The information is shown in a clean, easy-to-read layout for quick decision-making.

13. **Destinations** :This module shows a slideshow of popular travel destinations with images and captions. It helps users explore attractive places visually before planning their trip. The sliding images create an engaging preview of various hotels and locations.

14. **BookHotel** : Lets users book a hotel by selecting days, number of persons, AC or non AC rooms, and food options. The system calculates the total cost and stores the booking.

16. **Payment** : Opens the payment interface where users can proceed with the Paytm payment page. Creates a real-life experience of making digital payments.

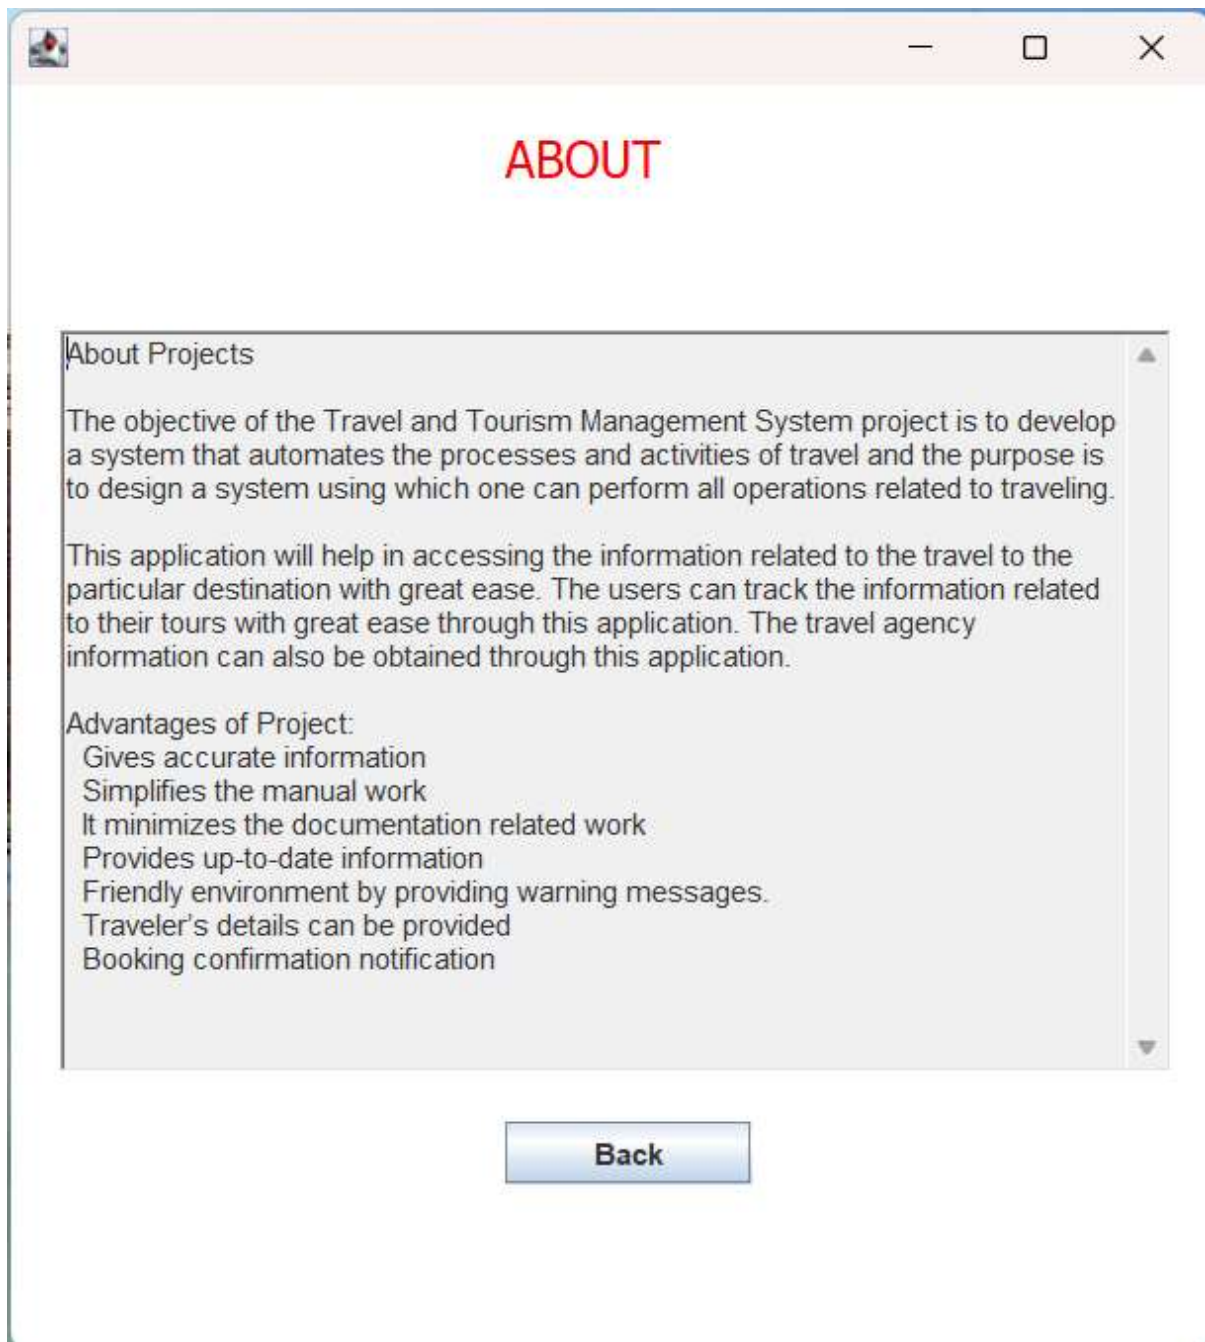

17. **Calculator** : A simple built-in calculator that helps users with basic calculations while planning expenses.

18. **Notepad** : Opens the system's notepad so users can take quick notes without leaving the application.

19. **About :** Gives a short description of the project, its purpose and benefits. Helps the user understand what the system offers.

- 20. DeleteDetails:** This feature allows users to remove their personal and account information from the system. It ensures that all related data, including bookings and records, are permanently deleted when requested.

Conclusion :

The Travel and Tourism Management System successfully automates major operations of a travel agency. It eliminates manual work, reduces errors, and improves efficiency for both travelers and administrators.

With the use of :

- Java Swing for GUI

- JDBC for database connectivity

- MySQL for backend storage

...the system provides a complete and reliable solution for travel management.

This project demonstrates knowledge of:

- Object-Oriented Programming

- GUI - Oriented Programming

- Database handling

- Event-driven programming

- Exception management

The system is simple, efficient, user-friendly, and highly Scalable for future upgrades like online ticket booking And integration with real APIs.
